

PANNONIA KINCSE

Variety grown in Hungary since 1942, it is a cross between Reina de las viñas and Cegléd Szépe, also called Pannonia Gold. Early bud-burst period, it has an average-early the ripening period (mid-August). The cluster is large, and so is the seeded berry, with its green-yellowish colour. The thick, uncoloured pulp has a neutral taste.

Clones undergoing homologation procedure: VCR220.
